

## Moving elephants and rhinoceros? Standard oder individuell

Would you like to realize driving and lifting movements most effectively? Are you looking for solutions that don't require highly complex pneumatic, hydraulic or mechatronic drives? A straightforward and highly efficient drive system? The simplest solution is often the best one: Screw jacks. They combine mechanical precision, compact construction, robustness and long service life. Besides, screw jacks are very easy to service.

### Great variety of applications

Screw jacks, whether rotating or non-rotating depending on design and requirements are working in many everyday applications without being noticed. They are used for example in the Zurich Opera to shift pieces of scenery or to lift and lower the brushes in a cleaning machine. Or they transmit movements in machine-tools, production plants and in modern power shuttles where they are essential for moving pallets in high-bay storage facilities. If needed, they lift the load of an elephant and withstand the power resistance of a rhinoceros.

### Nozag offers specific solutions for high requirements thanks to Screw jack kit

Nozag provides a wide range of screw jack models. Just let us know your requirements, the connecting dimensions or your mounting situation. The mounting kit consists of different components, materials and a capacity range between 2 and 100 kN, thus providing fast, flexible and individual solutions for you. Smart solutions from the screw jack kit!

## We strike the balance!

Adjusting plates allow individual drive combinations on the same level.

### Lubricant dispenser – reliable and efficient

The automatic lubricant dispensers have many advantages. Replace the used grease nipples with low-maintenance dispensers.

- For universal application, even in confined spaces
- Low service cost, environment-friendly
- Running time selectable from 1 to 12 months
- Easy monitoring due to transparent case

Please feel free to ask for information about further mounting advantages.
