

Screw jacks, the 'all-rounders'!

Screw jacks belong to the treasures in drive technology! Why? Because their multifunctional design allows using them in a wide range of different drive solutions. Screw jacks perform lifting and lowering moves just like rotary moves, handling weights up to 10 tons or lengths up to 3 meters. These "all-rounders" are available in normal or corrosion-protected versions, for example for the food sector, as well as for explosion-proof situations.

Screw jacks – simple operation

A worm wheel and a screw redirect and convert the rotary motions into linear motions. They bear both traction and thrust loads and they offer a wide variety of mounting possibilities – have a look at our modular screw jack system and the online configurator.

You can now configure screw jacks yourself online

Nozag newly offers the possibility to configure your screw jack online with the help of a configurator. An elimination process guides you step after step. This will allow you to find your screw jack in a more efficient and direct way. The configurator will in parallel create the corresponding parts list to get directly a quote from Nozag.
