

Gear cutting technology with know-how and efficiency thanks to own production and assembly

Who produces, is closer to the reality of things! Nozag has been applying this motto for over 50 years. As a partner for our customers, we offer the complete process chain in the field of drive technology. It starts with the initial drawing with suitable engineering, continues with the in-house production of the gear components, and ends with the assembly of drive assemblies such as screw jacks or bevel gears.

In addition to comprehensive know-how and high quality, you benefit from high flexibility, great efficiency and cost-effectiveness.

We wish you a good start, much confidence and success in this new year.

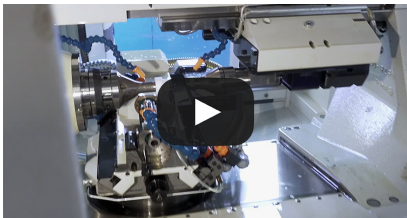

In 2023 too, we will be committed to meeting your challenges and solving your drive requirements.

Quality gears thanks to in-house production

Nozag produces all gear components such as cylindrical gears, worm gears and bevel gears in-house, whether standard products or according to individual customer specifications. The optimal machinery and the longstanding know-how combined with high flexibility enable small as well as large series with high quality at competitive prices. Whatever the chosen material (steel, bronze, brass, plastic, laminated fabric, ...) we manufacture module sizes from 0.3 to 8 mm with diameters up to 500 mm – straight toothed, helical toothed or even spiral toothed.

Units – delivered pre-assembled and ready for installation

Nozag assembles standard components, individually produced customized customer products and off-the-shelf parts to produce complete units. We supply complete screw jacks, also with attachment parts such as flanges, clevis, bellows or bevel gears with couplings, connecting shafts and much more.
