

## Our Christmas gift for you is advice to find drive solutions, so you don't spend endless time searching

When looking for drive components, you'll realize soon enough that Google produces way too many results with almost all of them not what you are looking for. It's pretty much like searching for Christmas gifts, isn't it?

Why not make direct use of well-known sources that provide a wide range of drive solutions from stock? Even if you start with only one approach for a solution, Nozag is the right partner for you. With us, your drive ideas, concepts and demands are transformed into brilliant implementations or we simplify them to the extent that even a standard solution leads to the desired result. Individual consulting inclusive, of course, hence a gift.

### Dampen Movements and Avoid Abrasion

Even in today's era of nano we still have situations where - in mechanical drive transmissions - the tolerances of other applications need to be bridged. Flexible couplings absorb such torque impacts and prevent mechanical wear of drive components. Couplings are used, for example, as connections between shafts or with drive motors. Within Nozag's range of products

you will find many types of couplings in different sizes and for various torques.

### Absorbing Overload at the Right Moment

Today's modern technology in automation requires maximum operation safety. What happens in case of an overload? In applications with drive transmission, for example, sliding hubs are used. They withstand the loads up to a certain torque before they trigger in order to avoid damage. You find

these sliding hubs in the Nozag assortment too.

### Connecting Shafts for Optimal Drive Transmission

In drive technology, connecting shafts allow to bridge distances in an elegant way. Nozag provides connecting shafts in various designs such as for radial assembly in clamping hub connections, for simple wedge connections or combinations with pillow block bearings in order to bridge very long distances. Of course, we carry out individual machining solutions that meet your specific requirements.

### Drive Components by Nozag – Examples from our Product Catalogue

## New Year Holidays

Our factory will be closed from 24.12.2014 – 04.01.2015. Nozag wishes you Happy Holidays and a successful and prosperous new year.

We are looking forward to be again your competent and reliable partner in 2015.

### Multiple Drive Components

Nozag provides a wide range of standard drive components available ex stock, unworked or machined and ready to install, delivered at short notice. Get your own impression.

### We are happy to advise you

Our expert knowledge and advice is important to provide the optimal solution for your specific drive requirement. You may find the entire Nozag drive assortment on [www.nozag.ch](http://www.nozag.ch) or contact us directly and get to know our sales team! Experienced specialists will be happy to assist you in finding even unusual drive solutions.
