AND YET IT IS FLAT

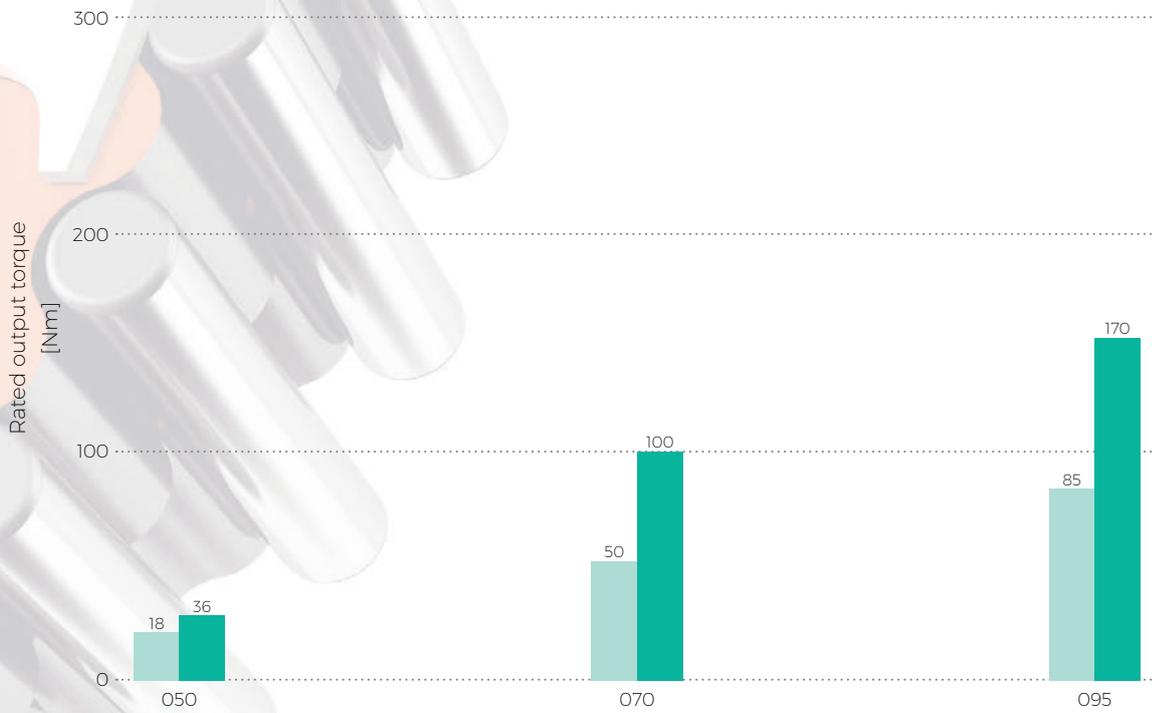

## 8.4 DSF series

### Advantages

- low mass
- compact design
- extremely short axial length
- high torque density
- high dynamic performance
- high moment overload capacity

The **DriveSpin® DSF** "flat" series of electric actuators is characterized by the extremely short axial length with focus on maintaining the key features of the DriveSpin®. The DSF series was designed to be the most compact solution with very low mass and small dimensions. The DS "Flat" series consists of TwinSpin® reduction gear, servomotor and various feedback systems to be fully compatible with customer requirements. The TwinSpin® reduction gear used in the DSF actuators secures high accuracy, positioning repeatability, torsional stiffness as well as high carrying load due to the implemented bearing systems. Rated torque range of the DSF series is from 12Nm to the 85 Nm.

1) Mean statistical value

2) Load at output speed 32 rpm for size 050, other sizes at 15 rpm

 3) Moment  $M_c$  max at  $F_a=0$ . If  $F_a \neq 0$  see Glossary

 4) Axial force  $F_a$  max for  $M_c=0$  (In case of size 050 also  $F_r=0$  condition has to be fulfilled). If  $M_c \neq 0$  see Glossary

5) The parameter depends on the version of high precision reduction gear.

6) The parameter depends on the version, ratio and lost motion of the high precision reduction gear.

 7) For size 050 this is value of MAXIMUM RADIAL FORCE  $F_{rmax}$  for  $a_2=0$ ;  $F_a=0$  and at 32 rpm output speed. For  $a_2>0$ ;  $F_a=0$  at 32 rpm output speed

 $F_{rmax} = 0.044/(a_2+0.0305)$  [kN].  $a_2$  represents the distance of the radial force centre from the front of the output flange in meters see Glossary.

8) Instantaneous speed peak that may occur within the working cycle. Note please the temperature on the gear case that should not exceed significantly 60°C

9) 4 500 rpm for ratio 73 ; 4 800 rpm for ratio 95

**IMPORTANT NOTES:**

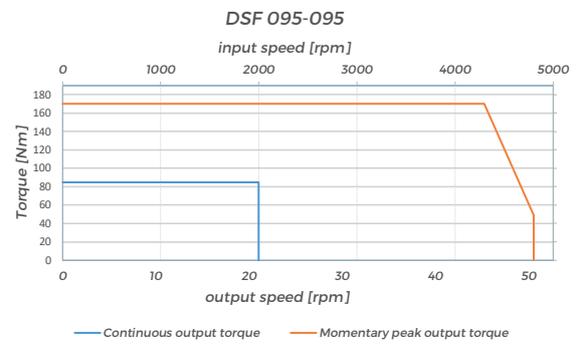

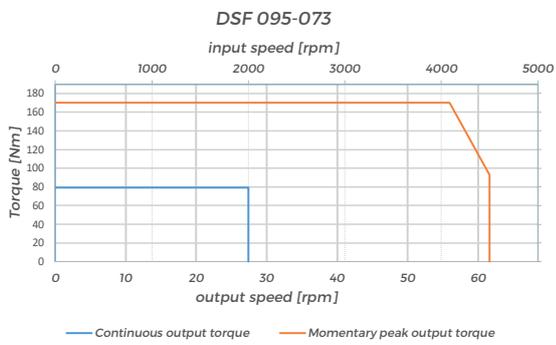

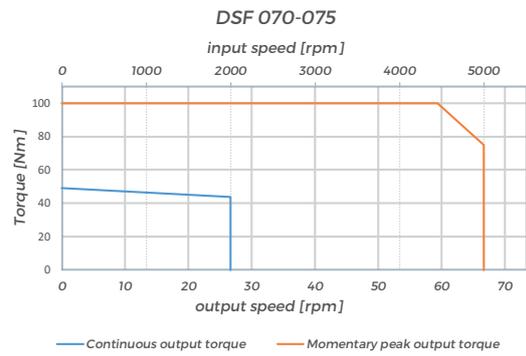

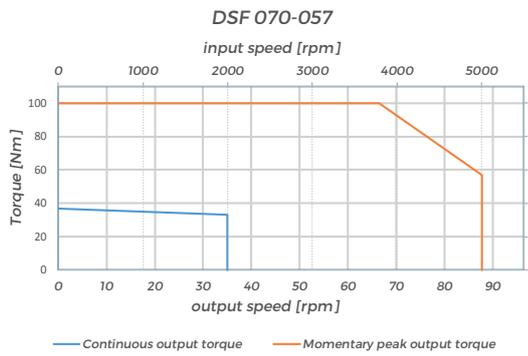

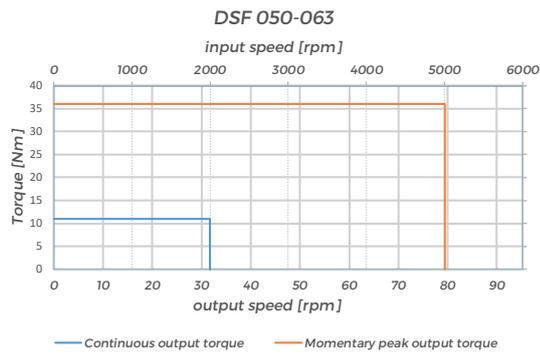

- Load values in the table are valid for the nominal life of  $L_{10} = 6\,000$  hours. Service life for average torque  $T_a$  and average speed  $n_a$  other than  $T_p, n_p$  can be calculated. Please contact manufacturer with estimated duty cycle.
- High precision reduction gears are preferred for intermittent duty cycles (S3-S8); the output speed in applications is inverted-variable. The S1 continuous duty cycle needs to be consulted with manufacturer
- Please consult the maximum speed in duty cycle with the manufacturer
- The values in the table refer to the ambient temperature of 20°C to 25°C
- For ambient temperatures lower than -10°C pre-heating might be considered please consult manufacturer
