

Why are screw jacks so popular?

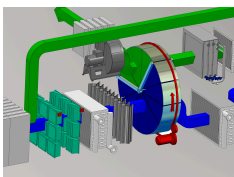

Their versatility makes them almost indispensable for many drive solutions. They perform precise lifting, lowering and rotary movements and they are available at short notice. Nozag's standard range includes load capacities up to 10 tons and stroke lengths up to 3 meters – optionally in standard design or with corrosion protection for demanding environments such as the food industry.

Additionally with its versatile combinations, extensions or connection possibilities, Nozag's modular system offers wide customisation possibilities and versatile applications.

Nozag's modular system – A shopping paradise for engineers and their drive requirements

Once again, Nozag's modular system for the drive technology has proven its advantages. EBT swiss engineering AG specifically selected correctly designed individual components that meet the environmental conditions – all in line with its proprietary "BOS Sorption" development for dehumidifying the process air in the food processing industry or other industries.

Europe – Distribution partner wanted

We want to develop the access to industrial customers in Europe and we are looking for you as our distribution partner for various European countries as well as selected regions in Germany and France. Do you want to successfully develop with us the potential for drive units such as screw jacks or gear components with us?

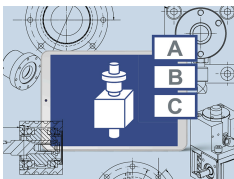

Contact us – info@nozag.ch

Easy online screw jack configuration

Nozag's handy online configurator helps you to conveniently design your screw jack, precisely according to your requirements. The intuitive step-by-step guidance based on an elimination process guides you quickly and in a targeted way towards the suitable product. At the same time, a parts list is generated, allowing you to easily request a customized quotation directly from Nozag.

Drive components from Nozag – range overview

Screw jack, 2-100kN

Modular screw jack system

Bevel gearboxes, $n=3,600\text{min}^{-1}$

Worm gears, $i=6.76-2700$

Nozag always offers added value and additional service

Customized Drive Systems with optimal gear geometry
