

Clever Components for machine construction

Headquarters in Hunzenschwil

In-house production

ROSTA is a global market leader in the development, production and distribution of innovative rubber suspension systems for the mechanical, plant and apparatus engineering industries. ROSTA applications are found for example in mining and automotive manufacturing as well as in outdoor fitness parks. Global distribution of the brilliantly simple ROSTA rubber suspension concept enables a wide range of innovative, customised solutions.

For 70 years, we have suspended, damped, supported and tensioned drives and oscillating systems in all areas of industry with our unique ROSTA rubber suspension elements. We are capable of implementing almost all requirements for elastic pivotal bearings for industrial applications using our standardised machine components, which are stocked worldwide. Simplicity paired with technical competence, automated production and ready availability is our recipe for success. Our engineering expertise can turn your visions into reality!

Facts & Figures

Turnover	CHF 26 million
Employees	100 employees world-wide
Markets	Mechanical, plant and apparatus engineering, mining, food processing, automotive manufacturing, amusement and outdoor fitness parks
Products	Oscillating conveyor technology, tensioning technology, rubber suspension technology (components)
Subsidiaries	Australia, China, Germany, Italy, Canada, USA
Established/with POLYGENA	1944/1996
